Hybrid

Catalog Description

This is a course in basic operations of arithmetic of whole numbers. Topics include the definition of whole numbers; adding and subtracting whole numbers; writing whole numbers in standard and expanded notation; and applications of adding and subtracting whole numbers.

Schedule Description

This course will focus on adding and subtracting whole numbers with applications.

MyOpenMath can be used with any textbook

For Text greater than five years old, list rationale:

The College of the Redwoods textbook is older than 5 years, but it should work fine since the content should not have changed since then. Since it's an open resource, if there are mistakes that the professor comes across while using it, those can be corrected easily.

Class Size Maximum

40

Course Content

1. Basic number facts
 - a. Place value
 - b. Addition of whole numbers
 - c. Rewriting numbers given in standard form to expanded form
 - d. Subtraction of whole numbers
2. Applications
 - a. Computations using both addition and subtraction of whole numbers
 - b. Calculating perimeters of polygons
 - c. Calculating area of rectangles

Course Objectives

Objectives	
Objective 1	Demonstrate proficiency in basic whole number facts such as place value, addition of whole numbers, and subtraction of whole numbers.
Objective 2	Compute using the basic operations of addition and subtraction on the whole numbers.
Objective 3	Apply the basic operations to solve application problems including those involving perimeter of basic geometric shapes.
Objective 4	Compare and convert between the different ways of writing whole numbers such as writing in standard notation and in expanded notation.

Student Learning Outcomes

Upon satisfactory completion of this course, students will be able to:	
Outcome 1	Identify and describe the meaning of place value in a whole number.
Outcome 2	Use addition and subtraction of whole numbers to solve application problems and evaluate the reasonableness of the results.

Methods of Instruction

Method	Please provide a description or examples of how each instructional method will be used in this course.
Technology-based instruction	Students will complete problem sets and receive feedback (automated and/ or from professor) on assignments.
Laboratory	Students will participate in individual and group exploration of course topics. Professor, ISA(s), and students will discuss and explore course topics.
Demonstration, Repetition/Practice	Students will be given additional problem sets to complete on their own to improve skills.

Tutorial	Students will read, watch, and/or listen to material presented and explained through various media.
----------	---

Methods of Evaluation

Method	Please provide a description or examples of how each evaluation method will be used in this course.	Type of Assignment
Computational/problem-solving evaluations	Students will solve problems that involve whole numbers and operations on whole numbers. They will receive feedback on their answers and explanations from the professor. The out of class portions of these problem sets should require about 16 hours of work over the course.	In and Out of Class
Self-paced testing	Students may take short quizzes for grade and/or for credit and/or self-evaluation purposes. Out of class self-paced testing should be elective and used for the purposes of studying.	In and Out of Class
Mid-term and final evaluations	Unit tests and a final examination will consist of questions about course concepts and problems requiring students to perform operations on whole numbers. These examinations may have take-home components.	In and Out of Class

Assignments

Other In-class Assignments

1. Students will take notes on lectures, videos, and/or reading.
2. Students will participate in classroom activities that serve to review, analyze, and evaluate skills with whole numbers.

Other Out-of-class Assignments

1. Students will read textbooks, read online material, watch videos, and/or participate in technology-based tutorials.
2. Students may be asked to summarize assignments and activities.

What will you be doing in the face-to-face sections of your course that necessitates a hybrid delivery vs a fully online delivery?

Although the course can be offered entirely online, it may also be offered hybrid to take advantage of collaboration activities that are more suited to in-person interaction.

Examinations can be given in a controlled location.

Lab Courses

How will the lab component of your course be differentiated from the lecture component of the course?

Lab activities and discussions will involve more active learning than lecture activities.

From the COR list, what activities are specified as lab, and how will those be monitored by the instructor?

Lab activities may include group-work, problem sets, exploration-based learning, and/or discussions. Discussions and other work completed in Canvas are monitored and evaluated by the professor. Work that does not take place in Canvas are evaluated by the professor based on write-ups (which may include summaries and feedback from the participants). Anonymous and non-anonymous feedback opportunities will be available to students to allow the professor further monitor effectiveness and appropriateness of activities that take place somewhere other than on the course LMS.

How will you assess the online delivery of lab activities?

Reports and other forms of write-ups will be submitted on the course LMS for evaluation and feedback.

Instructional Materials and Resources**If you use any other technologies in addition to the college LMS, what other technologies will you use and how are you ensuring student data security?**

Depending on the textbook used, the professor may choose to use Pearson MyLab and Mastering, WebAssign, or MyOpenMath. All of these are considered to be safe for use in education for both faculty and students. All can also be integrated with the college LMS (Canvas), which decreases the amount of times students will need to sign-in-and-out of accounts and open them up to data breaches.

If used, explain how specific materials and resources outside the LMS will be used to enhance student learning.

Professors who choose to use Pearson MyLab and Mastering, WebAssign, or MyOpenMath do so in order to assign pre-written or instructor- created problems that are more complicated than those that can be created in Canvas while still receiving instantaneous feedback.

Effective Student/Faculty Contact**Which of the following methods of regular, timely, and effective student/faculty contact will be used in this course?****Within Course Management System:**

Discussion forums with substantive instructor participation
Online quizzes and examinations
Private messages
Regular virtual office hours
Timely feedback and return of student work as specified in the syllabus
Weekly announcements

External to Course Management System:

Direct e-mail
Posted audio/video (including YouTube, 3cm mediasolutions, etc.)
Synchronous audio/video
Telephone contact/voicemail

For hybrid courses:

Scheduled Face-to-Face group or individual meetings

Briefly discuss how the selected strategies above will be used to maintain Regular Effective Contact in the course.

Faculty will regularly contact students individually and as a group through Canvas messages and/or COD email. Students will also receive regular announcements with information about the course, COD as a whole, or other relevant information. In discussions and through other lab assignments, students will communicate with each other and their professor regularly and frequently.

If interacting with students outside the LMS, explain how additional interactions with students outside the LMS will enhance student learning.

Students may prefer to contact their professor via email or on the phone, which allows for an improved experience for those who communicate better in those contexts. The professor may direct students to access free supplemental resources as well.

Justification

The course is designed to allow students to learn, re-learn, and/or practice material that is fundamental to mathematics study. If a student has taken the course but is not confident enough in their skills to sign up for a more advanced course, they may repeat this course to improve both skills and confidence.
